DETAILED ACTION

Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11, drawn to an apparatus for a conscious sedation system.
- II. Claims 12-14, drawn to a method for calibrating a patient's audio baseline level in a conscious sedation system.
- III. Claim 15, drawn to a method for monitoring a patient's response to the administration of a conscious sedation drug.

The inventions are distinct because of the following reason:

Inventions in Group I and Group II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the apparatus in Group I can be used in a materially different process of using than what is claimed in Groups II & III. For instance, the apparatus in Group I can be used as a vigilance system for night time drivers.

Inventions in Group I and Group III are also related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially

different process of using that product (MPEP § 806.05(h)). In the instant case, the apparatus in Group I can be used in a materially different process of using than what is claimed in Groups II & III. The aforementioned vigilance system would also prove the distinctness between these two groups.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
